Watch apps were among the first apps available. After all, smartphones are great during talking. You always have it on yours. Phones have evolved a lot. Watch apps also have, but not nearly as much. These are still great ways to just say time. Here are the best watch apps and watches widgets on Android! There are many types of watch apps. We will try to include as much diversity as we can! We would also like to mention beautiful widgets with honor. It hasn't seen an update in years, but it's still one of the best watch widget apps available today.1WeatherPrice: Free/\$1.991Weather isn't what you'd normally think when thinking about watch apps. However, 1Weather has one of the best watches and weather widgets we've seen. It's neutral and configurable. You should do that with most phone topics. The widget is also quite fashionable. The app is also a very decent time app. He does common things like showing forecasts, current weather, and radar. All features of the app are free. If desired, you can pay an optional \$1.99 to remove advertising. Heavy sleeper alarm clockPrice: Free / \$1.99Alarm Watch for heavy sleepers is a surprise-free app. It's an alarm clock app for people who are heavy sleepers. Allows you to set multiple alarms. Each alarm can have its own custom settings. It also comes with Android Wear support, location-specific alarms, and more. They also have a snooze challenge puzzles. Essentially, you need to wake up and solve the puzzle before the alarm goes off. You can download the app for free. The pro version will let you run a meager \$1.99.Alarm Clock for MePrice: Free/\$2.99Alarm Watch for me is from better watch apps. You can set an unlimited number of alarms. It also comes with other basics such as sleep timer. Some of its more unique features include nightstand mode so you can use your phone or tablet as a digital clock next to your bed. In addition, there are some topics, weather information, brightness slider, flash and more. What makes this great is that you can use it at night for almost everything you should use it for at night. An in-app purchase of \$0.99 will remove ads. Everything else is free to use. Alarm Clock XtremePrice: Free / Up to \$4.99Alarm Watch Xtreme is another of the more excellent applications for the alarm clock. He's got all kinds of alarms. This includes music, crescendo alarm and more. It also comes with a particularly large snooze button in case you're not ready to wake up yet. The app also has math problems to try to wake you up during an alarm. It also comes with a timer, a simple sleep tracking and more. You can solve ads by purchasing a pro version. It's an all-around strong performer in this space. Big Digital ClockPrice: FreeBig Digital Watch is self-understood. It A big, digital watch. That's useful for those who want to have a digital watch on a nightstand or chair. Otherwise, there's not much practical use. You can change the color to Whatever you want. It can also quite well handle landscape or portrait mode. There is even the ability to move the clock around the screen to prevent combustion on phones that have this problem. It's completely free without in-app purchases and without advertising. It's a great thing for one of the simplest but best watch apps. Panagolaprice Digital Watch: FreeDigital Clock by Panagola is a simple, efficient digital watch app. Displays different time elements and you can use several different time and date formats, colors, and watch layouts. It doesn't have an alarm clock function or any fancy stuff like that. However, the size of the app is a pitiful 0.1 MB, so it is also the easiest possible solution. The app is completely free without in-app or ad purchases. Digital watch Widget XperiaPrice: Free / \$1.14Clock widgets are hard to find these days. However, Lazar Dimitrov's Digital Watch Widget is an autatisan and decent. It's a simple watch widget for your home screen. Displays time, date, battery, and an extremely brief overview of the time. Widgets are slightly customizable and come in different sizes. It should suit most start screens and themes. He has the word Xperia in his name. However, it worked on all our test devices just fine and none of them are Sony devices. This is definitely one of the better watch apps. Google ClockPrice: FreeGoogle Watch is probably the most stable of the watch's apps. This can do all the basic things you'd expect from the watch app. It includes a stopwatch, a timer, a watch and an alarm. The alarms are simple enough to set. Stopwatch and timers are very easy to use. The app also has a material design. That means it looks and works beautifully. There's also Android Wear support, as well as a World Clock feature. It doesn't have a ton of features. However, it helps keep the app lightweight. It's a good choice for those who just need a simple watch app. KWGT and KLWPPPrice: Free/ \$4.49 everyKWGT is a custom widget maker. There are some good watch widgets and sat apps on Android. However, sometimes it is better to make your own. KWGT lets you do that. Contains a variety of tools, themes, and functions to customize as you wish. It's a little hard at first. However, the results speak for themselves. It's a favorite theme and modders because they get the look they want right away. The pro version is worth \$4.49. The same developer also does KLWP, a live wallpaper creator app that can add live wallpaper to your home screen. You can also use KWGT with Google Play Pass for free if you use this service. TimelyPrice: FreeTimely is one of the most popular watch apps ever. It went viral when it came out. Developers used to hand out free premium upgrades to people who shared. You can only imagine the spam storm that caused it. Anyway, Google eventually bought Timely and made it free. It has a beautiful interface. the screen is a clock. You can swipe to the left screen to find On the right screen there is a timer. It's all very simple. There are topics that configure it. It doesn't do much but do three basic things. However, it's fun to watch and it's free. The app is currently having some alarm issues, so if you need an alarm clock as well as a watch app, we may not recommend this one until they fix it. If we missed any great watch applications, tell us about them in the comments! You can also click here to check out the latest Android app and game lists! Click for a bigger picture Team review Five highly customizable digital time. The app doesn't have a detailed description yet, however the team has assigned a note of 8/10. This note is based on the following criteria: Quality, Utility, Ease of Use, Privacy Concerns of User Data (depending on the permissions required).. The app is compatible with most Android devices running on. Its weight is very light, less than a megabyte is enough to store and work. Its number of downloads on the Android market (Google Play) is quite low. The app is either new or limited to a specific area that interests only a few users. User reviews Add a review 41 users gave their review on digi watch widget. Great widget old Hickory TonyGreat widget besides being misspelled 5/5 October well. Get it if... an anonymous... you just need the watch you want to customize. It has only restricted permissions (sd card). Plus 4 hot spots to customize any app you need. 5/5 using an AnonymGreat app. He's doing a good look at SIII. Still, I can not blame it 5/5 Exactly what I asked of anonymI is looking for a watch to go to my icars (from Star Trek:TNG) themes phone and was not satisfied with the font on Star Trek themed watch widgets available. Setting this up in Sans Bold is just about right. Maybe I'll be able to get a better see like that let's load more fonts, but I didn't realize what font would work best yet. 5/5 The most residual by anonymCombined with a new launcher this app is my dock, alarm., and app launcher. Adjust your life. 5/5 Good! by anonymGreat customization job 5/5 Samsung Galaxy Tab S 8.4 anonymWorks perfect. thank you very much. 5/5 Exactly what I was looking for! by anonymThis is a pretty stable, fully featured application! With all the possible customizations, the DIGI Watch Widget could be described as fun! Thank you! 5/5 DIGI Watch Widget by anonymOne the scariest customizable watch on the Android market! I've used it on every Droid I've ever owned and I love it! I particularly like the hot buttons... they make it easy to access apps I use frequently (i.e. alarm, calendar, etc.). WTG DIGI! Thx! 5/5 Digi Sat App by anonymPerfect for what I wanted. The kid cleans the clock at any size I wanted. 5/5 A very good anonymThis app is the best of all the watches I've used so far. Easy to use and has everything in it. Five 5/5 Digi Clock widget by anonymGreat, beautiful apps. Multi functions, graphically wise very beautiful, looks impressive and 5/5 Samsung s4 by anonymBest digital watch out there would buy a plus if it had a battery meter on it also android fonts for the watch will be cool 4/5 Awesome app anonymI as a change every now and again, this app allows me to do it! 5/5 DIGI watch - anonymous king customization If all you want is a digital watch that displays hours, minutes and seconds in a 24-hour double-digit format, and you want to see the Day, year, moon, date in exactly the font and color you want, you need this widget. Customize it just the way you want, then enjoy your choices every time you see the home screen - a great little program. 4/5 Causes a significant lag of the phone by anonymIt is a great application, one that I downloaded solely for the purpose of having a watch that displays seconds. Unfortunately, allowing seconds to be displayed has introduced lag on every function on the phone (scrolling becomes incredibly cramped, opening apps is slower, etc.). Disable the seconds and everything is fine again. Shame. It will probably uninstall, or at least not use, until it is fixed. 2/5 Very useful by anonymFinally military put widget, my time up is so small and hard to read when I'm just dragging it quickly to check the time at work 5/5 One of the best free watches Widgets by anonymOut of the numerous Widget watches that I downloaded and tried so far, this one is at least in my Top Five, if not number one. This allows you to make a fairly detailed adjustment to basically every aspect of the widget itself. I haven't paid for the full widget yet, but my only Con of this waiget and probably every Widget watch I've tried is a lack of limited selection of actual time/numeral fonts, but that's about it. This widget is completely radical, bro... 5/5 Simple and useful anonymA simple thing to display date and time on your smartphone screen. I use it in the supermarket to find out how long I have before my purchases reach the food by date. Handsome and if you wake up not knowing what day it is... 4/5 by anonymOs watch is just OK. I'm still trying to set colors where I can read it easily. 3/5 Janie anonymKeeps by locking my Samsung Galaxy 5 phone to the point that the battery must be removed. It worked great on the Galaxy 4, but it doesn't play well with newer phones. 2/5 Nice by anonymI as it is you can determine the outline, so whatever wallpaper it will still prove good. 5/5 by anonymIt's great, you can change the type of text and color, with or without an out line that also changes color! 5/5 Nice watch, use this watch by anonymously on all my devices because it also runs another app and you can reduce it to fit the size screen. Also change the font and colors. 5/5 Works fine by anonymJes the only widget I could find that [sadasi seconds and it works without fuss. 5/5 It's so easy to adapt, great for people with low eyesight! I'm as legally blind as my husband. WE LOVE the ability to make a watch that we can no matter what! Massive thank you thanks Development Team &amp; we have this AMAZING app installed on all our Android devices. ?????? ??? ?????? ??? ?????? ?????? ??? 5/5 Finally found an anonyma watch that I like. It has everything I wanted, including multiple alarms, with a very simple schedule. Very flexible. 5/5 Do what he says he's going to do... an anonymous... most of the time. I don't get an AM/PM indicator on Droid MAXX. In addition, a large application. 4/5 Fun watch by anonymThis app really dresses your phone. Many are fonts, colors, and other variables to choose from. It's much nicer than regular old numbers. And it doesn't use much energy or space. 5/5 Wonderful widget by anonymHave has tried many other widget watches this is one of the best I've found. Keep up the good work. 5/5 Very well done anonymEasy to follow, and easy to use. One concern in the free version of the ads at the bottom are quite large to get in the way of settings. Still 5. Thank you. Nexus 7 2013 5/5 Perfect by anonym I keep changing the subject! Think Ill go with Batman forever. So pump, just a suggestion is to add more choices! I love a simple set, and it fits perfectly on my phone 5/5 GoTo Clock anonym It's my go-to watch app! So far you have installed it on 6 phones. As a look, personalization and ability to set size! 5/5 Best watch App by anonymDoes all. Just experiment with him and you'll see it for yourself. MUST DL!!! WORKS ON ALMOST EVERY PHONE 5/5 Love it!!! Beautiful!!! By anonym You can set it with any layout you want. It's much better than Android's original version! I use it on all my Android devices!!! --> I believe that people who give it 3 or fewer stars simply did not have the patience to configure every detail. It doesn't make sense for this app to receive less than 4 stars!!! 5/5 per anonymGreat application I had to learn military time and I installed it on the third ground and switched forward and within a day I got it thanks 5/5 No problem! anonymEasy to use, flexible and simple without trying to be too fancy. I've never had a problem! Great app! 5/5 This just works! by anonymWas looking for the perfect watch widget for my Galaxy Tab S and having tried several non-starters, came across DIGI. Too bad I didn't find this first. It would save a lot of time and trouble. 5/5 Simple and clean yet so complete! by anonym I wanted a simple widget. There are no additional status updates or weather forecasts or news attached. That's it. But it's also fully customizable. I made it fit my LCARS theme - a small, no background and even the correct Swiss 911 font. You can change literally nothing about this widget. Just do not use seconds (lags), but if you need seconds, get a stopwatch! This is happening on all my devices! 5/5 Almost perfect by anonymGreat app works above and beyond what I expected, my only problem is that although I turn off the perfect sleep timer is a stupid thing to have in alarm anyway if I wanted to just set 2 alarms) occasionally I get my alarm triggered on intervals, not nearly often enough to delete it, but even once and then and time is uncomfortable. 4/5 Finally anonymI finally found a watch widget that is not annoying. I like the settings. Use any font you want to download to your phone. I'm using Burton's nightmare right now. 5/5 Add your review : Write a comment on the app, make your suggestions for improvement... Permissions required on the device To work, the application requires access to the functions of the following device :Indefinite. :Indefinite.
